

Can Liners

Healthcare

The following steps should be utilized to determine and select the appropriate liner/liners for use in a healthcare setting, whether it is a hospital, surgery center, clinic, or general medical office. Anywhere can liners are used: in the O.R., kitchen, patient rooms, or even the parking lot.

The most important question to ask is, *how will the bag will be used?* Step 1 will help guide you to the appropriate resin type. Steps 2, 3, and 4 will help fine tune to your item selection.

## Step 1 - Choose the Right Liner/Resin Type:

### High Density HDPE: *Non-Sharp Waste*

- Thinner, stronger HDPE film also means less plastic waste going into landfill, so these are a great source reduction choice too
- A strong liner for heavy-wet or non-sharp waste thanks to HDPE resins
- Star bottom seal
- Convenient coreless rolls for ease of use and storage

### Ultra-Premium Blended Linear Low Density (LLDPE): *Premium*

- Heavy-duty, high-performer that handles industrial loads including irregular or sharp waste
- Superior puncture and tear resistance (vs. other types in assortment)
- Star bottom seal
- Convenient coreless rolls for ease of use and storage

### Linear Low Density LLDPE: *Everyday Choice*

- An “every day” liner that offers good strength, puncture and tear resistance
- Some items (as noted) contain 10% post consumer resin; these liners may also qualify for LEED points
- Star or flat bottom seal
- Convenient coreless rolls for ease of use and storage

### Blended Recycled LLDPE: *Repro*

- Heavy duty, thick liner made primary from recycled (reprocessed and/or PCR) resins
- This black product offers good strength, puncture and tear resistance. A cost-effective performer
- Star or flat bottom seal
- Convenient coreless rolls for ease of use and storage

## Step 2 - Choose the Right Size and it begins with the Container:

### BAG WIDTH

Measure the circumference of the container (the distance all the way around the top of the container). Divide it in half. This is the bag width needed.

### BAG LENGTH

Measure the height of the container + Measure the diameter and divide by two + 3” for overhang. This is the bag length needed. For square or rectangular containers, use the diagonal of the container bottom.

## Step 3 - Choose the Right Gauge:

- Too weak or light increases likelihood of bag failure and promotes unnecessary double bagging
- Too thick and money is thrown out with the trash
- Rule of thumb: if waste goes out in the container, a can liner is all that's needed (thinner); if the bag is doing the work (no container), use a heavier gauge trash bag

## Step 4 - Choose the Right Color:

- Choose clear or natural if required to see what is disposed
- Black or opaque colors will help shield contents from public view
- Check with local municipalities for recycling segregation requirements
- For offsite disposal of biohazard waste, choose LLDPE items with biohazard symbol.

## Step 5 - State Regulations PCR:

- Confirm you are in compliance with your state regulations for PCR.

### DID YOU KNOW?

Coreless rolls work great as ready made dispensers. Just open the first liner and fit to your receptacle as you normally would. Instead of removing the single liner, place the entire roll at the bottom of the receptacle. When the liner is full, simply tear off at the perforation. The next liner is ready for use when needed.

1/ Berry Global Hospi-Tuff® can liners offer performance, value, and consistency across a broad range of healthcare waste containment needs. Available in printed (bilingual) formats:

Yellow—Infectious Linen

Blue—Soiled Linen

Red— Biohazard/Infectious Waste

1/ Berry Global brand packaging  
2/ Contains Post Consumer Resin

# Healthcare

## Can Liner Item and Common Container Quick Guide

Find your receptacle at left then choose the can liner film that works best.
